

BLADDER CANCER

DOESN'T ALWAYS LOOK LIKE YOU EXPECT

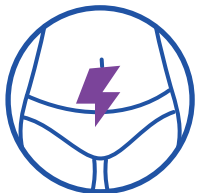

In women, symptoms can be overlooked or misdiagnosed.

Bladder cancer symptoms are not always obvious—and may present differently in women. Some signs may be mistaken for other conditions, leading to delays in diagnosis.

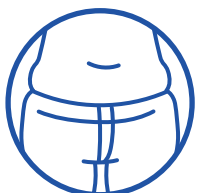

Possible symptoms may include:

Pelvic or lower back pain

Abdominal pressure
or discomfort

Changes in how clothing
fits due to pain or bloating

Don't ignore persistent symptoms.

If something doesn't feel right:

- ! Ask for further evaluation
- ! Request appropriate testing
- ! Follow up if symptoms continue

**You know your
body. Persistent
symptoms
deserve
attention.**
